

## VelocityReport Plugin - Defect #504

### errorPage setting is not honored

04/27/2012 05:45 PM - Robert Ivens

<b>Browser (if web client):</b>			

#### Description

It seems that the errorPage vr\_config setting is not used/honored. When you request a page that doesn't exist then you get the following Tomcat error instead.

```
HTTP Status 400 - java.lang.RuntimeException: No template and no response returned from globals.vr_getContext at

#### History

##### #1 - 05/01/2012 05:19 PM - Patrick Talbot

- Status changed from New to In Progress

The errorPage vr\_config setting honored when you return a response of type Error, using plugins.Velocity.createErrorResponse()  
In case of template not found + and form/global vr\_getContext() not found, I wasn't make use of it, but I think that I can do it.

##### #2 - 05/01/2012 05:45 PM - Patrick Talbot

- Status changed from In Progress to Resolved

I've done so that in case of template not found (and context not found), I use the errorPage, initializing it with a 404 status and the exception you saw above.

Just beware that in case of a 500 error (server error), this will not be possible though, because in most case an error would have occurred in the servlet itself.

##### #3 - 05/01/2012 07:09 PM - Patrick Talbot

- Status changed from Resolved to Closed
