Target version:			
Browser (if web client):	Chrome, Mozillla,...		

Description

Busy Plugin does not load on servoy 2021.3.0.3642
It does not work in both SmartClient and Webclient. What can I do to get the plugin to load correctly and work again? I have tried to do a clean install of Servoy but it still does not load the plugin.

Don't know what's wrong with your installation but I tried in 2021.3.0.3642 and it works perfectly fine (in Smart and Web client, not NG).
See the screen capture video attached, and the .servoy test solution that I used.

All I did was put the latest busy-v2.jar from the Files section in my /application_server/plugins and it works fine.

Attached are the errors that appear when starting my Servoy about the Busy plugin. If you could give me an idea of why I get those errors and how to solve them I would appreciate it

#6 - 06/15/2021 11:41 AM - Patrick Talbot

From the stack trace, it looks like the problem is in the certificate, which is different from a newer certificate I've used for more recent plugins jars (I suppose you are using another one of mine, like Velocity perhaps?)

BTW, since the plugin hasn't been updated since 2015(! - and still works ;) the certificate has expired.

I have updated the signature in the new busy-v2.jar I've uploaded in the Files section

Try updating, and if there are other plugins of mine that you use, make sure you update to the latest signed version as well. The signature from the same packages (in this case net.stuff.servoy.*) should match, but since 2015 I have used at least 2 new certificates.

Or another thing to do is to sign all the jars yourself.
