Looks good!

Need help?

This is blocked...

Can you clarify...?

i think you are just mixing jars and having plugins with old jars  
what you should have is in the plugins/pdf\_output/ dir a openpdf.jar that is of version 1.3.30 or higher  
You shouldn't have an openpdf or itext.jar (which is openpdf now a replacement of) anywhere else  
I guess you also still have an old itext.jar somewhere in one of your other plugins, that should be removed.

@Johan Compagner There is a **IText-4.2.0.jar** in the plugin velocityreport. Maybe velocityreport-plugin needs an update. I will check.

@Sjoerd Hannema thats very likely the problem, if you delete that jar then it should be fine (but then double check velocity if that still works)
