<b>Browser (if web client):</b>			

#### Description

When specifying a @page css section the margin-left,top etc need to be specified. If you forget to set it the complete servoy server crashes.

This is a working copy:

```
@page {
size: 30mm 12mm;
margin-left: 3mm;
margin-right: 0mm;
margin-top: 4mm;
margin-bottom: 0mm;
}
```

This crashes the entire servoy service:

```
@page {
size: 30mm 12mm;
margin-left: 3mm;
margin-right: 0mm;
margin-bottom: 0mm;
}
```

Problem is that these setting can be manipulated by our customers, so a users can crash the server.

- Status changed from New to Rejected

You let users edit the template??? It's a very bad idea.

Now if you are using variables for the size, why don't you put some safe guards if null or empty and put a value in that case?

I don't think it's a good idea to implement that at the Velocity level, this would be hard to do when it's a lot easier to make sure your template is correct...
