

Servoy JasperReports Plugin - Defect #1481

QR code error showing report in Servoy

01/22/2019 05:47 PM - Javier Arroyo

Status:	New	Start date:	01/22/2019
Priority:	Normal	Due date:

Target version:			
Browser (if web client):	Chrome		

Description

I downloaded Basic_Servoy_JasperReports_Plugin_v.6.4.1_svy84.zip for Servoy 8.4.
In some report that I have designed in Ireport there is a QR field that when displayed in Ireport shows it correctly. But in servoy with the plugin gives me the following error:

```
JavaException: java.lang.Exception: net.sf.jasperreports.engine.fill.JRExpressionEvalException: Error evaluating expression for source text: com.google.zxing.client.j2se.MatrixToImageWriter.toBufferedImage(new com.google.zxing.qrcode.QRCodeWriter().encode(.....))
```

How can I solve this error so that it shows the QR code correctly?

History

#1 - 01/23/2019 10:40 AM - Javier Arroyo

- File core-3.3.1.jar added
- File javase-3.3.1.jar added
- % Done changed from 0 to 100

I have solved my problem including the core.jar and javase.jar files to the servoy_jasperreports folder of the servoy plugins. It seems that I was needed to show qr codes.
After including them, everything was shown correctly
