VelocityReport Plugin - Defect #1596

getImageTag generates URL without an instance name

02/28/2025 05:41 PM - John Makkink

Status:	Closed		**Start date:**	02/28/2025
Priority:	Normal		**Due date:**	
Assignee:			**% Done:**	100%
Category:	velocity		**Estimated time:**	0.00 hour
Target version:				
Browser (if web client):				

Description

When generating the img tag from the function getImageTag it generates it without the instance name.
The "/servoy-service/velocitemp" will point to the root where it can't be found because there is no ROOT instance.

Input

```
<tr><td rowspan="3">$!care_person.image.getImageTag( { 'height': 90 } )</td>
```

Result

```
<td rowspan="3"><img src="/servoy-service/velocitemp?file=tmp_10435323386260472884.jpeg" height="90"/></td>
```

I used the functions:
plugins.VelocityReport.getPDFReport()
plugins.VelocityReport.renderTemplate()

History

#1 - 02/28/2025 08:54 PM - Patrick Talbot

- Category changed from overall to velocity

- Priority changed from High to Normal

The problem is that the plugin has no idea under what war/instance you have deployed your app... I would probably have to add a servoy-admin property to allow you to declare this instance. I'll see what I can do.

#2 - 02/28/2025 11:14 PM - Patrick Talbot

- Status changed from New to Closed

- % Done changed from 0 to 100

Applied in changeset r1789.

#3 - 02/28/2025 11:16 PM - Patrick Talbot

See v3.8 which fixes this by adding a velocityreport.warContext servoy-admin property
