VelocityReport Plugin - Feature #165

Fix root path as relative to template

10/06/2010 08:30 PM - Patrick Talbot

Browser (if web client):				

Description

#include and #parse are currently always using the report folder as root
So with a hierarchy like this:

        reports/

            inc/

                header.html

            templates/

                templateA.html

inc/

                footer.html

etc...

if templateA.html contains #parse('inc/footer.html) this will not work, while #parse('inc/header.html') will
This is counter-intuitive since any other (client-side) includes (like js or css files, done in pure html) are relative to the template itself.
