Target version:			
Browser (if web client):			

Description

Executing a client side js (plugins.WebClientUtils.executeClientSideJS()) like plugins.WebClientUtils.executeClientSideJS('var text = "only get this : this is lost" ', callback, ['text']; the callback function doesn't receive all the string in the arguments, only get the string before the ":".

You can check this in the sample solution:

Click the button "Client Side JS". The text in the 1st text area is returned to the 2nd text area via callback of a plugins.WebClientUtils.executeClientSideJS().

The text returned isn't complete (only return the string before ":").

Thanks.

Neocursar Developers Team.
