

Servoy JasperReports Plugin - Defect #176

test properties exist for virtualizer settings.

Description

Hi,

I would like to continue issue 38 of the googlecode site here:

<http://code.google.com/p/servoy-jasperreports-plugin/issues/detail?id=38&can=1>

These are the three latest reactions, I want to continue:

jeffwbader:

Hi Harjo,

Nothing I see in the plugin code will report any errors to the servoy log or elsewhere if the page out dir is invalid. There is no sanity checking at all and it would seem to fail silently.

I think this should be changed.

Andrei:

Hi Harjo,

You can only see the virtualizer working if you try it with a big report (say 50k records in a table).

Also, to "see" the error, try to surround the runReport call with a try catch block and output the error object to see what it is.

Regards,

Andrei

Harjo (me ;-):

Hi Andrei,

the call is now:

```
try {
plugins.jasperPluginRMI.jasperReport(vDbalias, vPath, vOutputFile, vTypeOutput, vParameters)
} catch (e) {
application.output(e);
}
```

and this:

```
vParameters.VIRTUALIZER_TYPE = "file"; //possible options: file, swapFile, gZip
vParameters.PAGE_OUT_DIR = "c:/temp123456/"; //this folder does NOT exist
```

running this code, doesn't show an error in the console, or servoy_log.

Think I'm going crazy here.... ;-)

So point is, that if we provide the two properties:

```
vParameters.VIRTUALIZER_TYPE = "file"; //possible options: file, swapFile, gZip
vParameters.PAGE_OUT_DIR
```

the plugin should check if VIRTUALIZER_TYPE == 'file' or 'swapFile' or 'gZip'
the plugin should check if PAGE_OUT_DIR folder exists!

Now we can provide ANYTHING into those parameters, and NOTHING is reported if something is wrong.
