<b>Description</b>			
I noticed that the latest release (1.0.1) fix the issue <a href="#">#175</a> , but there are some special chars with the same behavior. For example: #,€,°,ª,&,¡,¿			
Thanks for your effort guys!			

### History

#### #1 - 11/23/2010 11:50 PM - Patrick Talbot

This is different. I presume this is a problem of charset encoding.  
I guess you receive scrambled characters instead, is that it?

The other one was that the ':' character was used as a separator for parameters.

#### #2 - 11/24/2010 08:23 AM - Victor Rojo Carballo

Not, I only receive the string before the character '#' for example (like with ':').  
I think that you can check it in the sample solution of the [#175](#).

Thanks!

#### #3 - 01/06/2011 06:48 AM - Patrick Talbot

- Status changed from New to Closed

Fixed with v1.0.2: using encodeURIComponent instead of encodeURI

@Victor: please refrain from assigning 'Urgent' issues to me. I'm not the author of this plugin.  
Thanks
