JSListPicker module - Defect #338

Multiselect in two listpickers over the same table

07/01/2011 01:44 PM - Victor Rojo Carballo

Status:	Closed		**Start date:**	07/01/2011
Priority:	Normal		**Due date:**	
Assignee:	Victor Rojo Carballo		**% Done:**	0%
Category:			**Estimated time:**	0.00 hour
Target version:	1.0			
Browser (if web client):				

Description
If you create two lispickers over the same table with the multiselect option enabled, you can not select anything when you open the 2nd listpicker.

History

#1 - 07/01/2011 01:52 PM - Victor Rojo Carballo

- File patch_ListPicker.txt added

Each listpicker has it´s own dataset of selected items, but the relation to access these selected items is created checking the table name. So the second listpiker uses a relation that points to the dataset of the first listpiker.
I add a patch for create these relations with name "this.form.name + '_' + this.form.tableName + '_to_selected'" to fix the multiselect in several listpikers over the same table.

#2 - 07/01/2011 01:57 PM - Robert Ivens

- Target version set to 1.0

Great! i will take a look at it.
Planned for version 1.0

#3 - 07/04/2011 02:53 PM - Robert Ivens

- Status changed from New to Closed
