Description

I have a simple template with a barcode. The template shows fine from a smart client launched from developer. However, the same template doesn't show the barcode when launched from a smart client that runs on the deployment server (without developer).

It could be that I'm doing something wrong, but maybe it is related with the issue stated in the FAQ? (11. Why are the media images embedded in reports not viewable in web preview/pdf when launched from a server?)

Or is it something else?

Ok, I've done something wrong here :-)

Just made a test with a very very basic template, showing only the barcode and no css, and it works great. It seems my template is breaking something..
