Description

Hi there, we use the jasper virtualizer_type, like this

```
var vParameters = new java.util.HashMap(); //object
    vParameters.put('VIRTUALIZER_TYPE', "gZip"); //possible options: file, swapFile, gZip
    vParameters.put("PAGE_OUT_DIR", plugins.it2be_tools.server().getApplicationServerDir() + '/server/work/');
```

so we use the /server/work folder for the page_out_dir.
But this folder is never cleaned up, is that right? see screenshot!

History

#1 - 08/01/2011 04:28 PM - Andrei Costache

- Status changed from New to Closed
- Assignee set to Andrei Costache

Fixed: cleaning up temporary files used by the virtualizer (after report exporting is done).
Just for the record: file virtualizers cleanup their files when closing the JVM and gZip does not rely on the file system for temporary storage.
