

Dialogs module - Defect #396

When globals.DIALOGS.setDialogHeight(height) is called with a too low value, the code bombs out

12/01/2011 03:23 PM - P Bakker

Description

See the stacktrace:

TypeError: Cannot call method "setLocation" of undefined (c:\workspace\mod_dialog\forms\dialogs_input.js#43)
at c:\workspace\mod_dialog\forms\dialogs_input.js:43 (setupForm)
at c:\workspace\mod_dialog\globals.js:87 (showDialog)

The reason why calling setLocation on elements.fldValue bombs out is most likely due to the fact that the form has been resized using the Solution model in such a way that the elements.fldValue is positioned below the last form part and thus is not available as element anymore in scripting (just like what happens to elements that are placed below the last form part @ design time)

History

#1 - 12/18/2011 07:44 PM - Robert Ivens

- Status changed from New to Closed

- % Done changed from 0 to 100

Fixed in next release
