**Description**

When I add a Time Series chart to a report I have to set the TimePeriod at design time. This makes it not posible to give the user the option to set his own time period for the report.
The only work-around I know of is to create a different subreport for each time period and add the correct subreport based on the users choice of timeperiod. This makes it a very time consuming and high-maintenance solution. I think it would be much better to be able to change this with a property/parameter.
