

VelocityReport Plugin - Defect #440

BarChart does not work using the local engine

03/01/2012 03:01 PM - Christina Wels

Status:	Closed	Start date:	03/01/2012
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	charting	Estimated time:	0.00 hour
Target version:			
Browser (if web client):			
Description			
Like in your sample solution, when I want to use my local engine (not google) the barchart image is not found. All I get in my html Area is a white square with a red X in it.			

History

Have you installed the eastwood.war in your Servoy/application_server/server/webapps/ folder?

Otherwise there might be a problem with one of your parameters.
Can you tell me the URL that is produced by your script?

#2 - 03/02/2012 07:44 AM - Christina Wels

The eastwoor.war is installed in Servoy/application_server/server/webapps/ folder.
The plugin returns me:

```
</img>
```

So i put together a html string:

```
<html><body style="width: 100%; height: 100%; text-align: center; vertical-align: center"></img></body></html>
```

When I commit false as the third parameter to the function plugins.VelocityReport.getChart()
It returns me

```
</img>
```

So my html string is

```
<html><body style="width: 100%; height: 100%; text-align: center; vertical-align: center"></img></body></html>
```

That works fine. But I don't like to send all my data to google.

- File eastwood.war added

- Status changed from New to Closed

Found the problem to be an exception when parsing the chbh parameter.
Please try with the attached eastwood.war

Delete the folder and eastwood.war found in Servoy/application_server/server/webapps and place the one attached instead.

Restart developer, this should fix your problem.

Will update the whole distribution soon.

#4 - 03/02/2012 09:24 AM - Christina Wels

Thank you very much for the quick answers! Now it works. The only thing I just notice is, that the barwidth is not considered. But for such things I can wait for your update.

#5 - 03/02/2012 03:28 PM - Patrick Talbot

This will not change with the update.

This is the way JFreeChart builds Bar Charts, the bar width is always automatically calculated, see <https://www.servoyforge.net/projects/velocity-report/wiki/Charting#Bar-chart>
