Description

Hello,

Need to hide certain tab on tab panel, but when configuring security:
Permission Type: User Interface
Form Name: certain_form
Element Name: <-- certain tab's name doesn't appear as an option (just the whole TabPanel name)

As it's a type-ahead input, have tried to fill it with precise certain_tab_name, but I get **Please sepcify an element** error.
Have tried to make not Visible&Accessible the related form, but it's still visible and accessible on related tab.

What's the best to hide tab from tabpanel?

Regards

As a work-around, would suggest following hack:

in servoySecurity/globals->secGetElementUUIDs added:

```
var tabUUID = 'UUID-of_the-tab_to_hide-from-certain_form_name.frm-file-opened-with-notepad'
```

```
if( record.form_name.equals('certain_form_name') ) //possibility to disable tab on certain form
```

```
values.addRow( 4,['tab_to_hide',tabUUID] ) //4 is index in case when there are 3 existing elements on form
```

This offers tab_to_hide as an option in TYPE-AHEAD and disables it if assigned.

security.getElementUUIDs(record.form_name) doesn't lists tabpanel's tabs; Share (better) ideas to fill TYPE-AHEAD with UUID&tabName pairs, please.

Regards
