

## KeyListeners Plugin - Defect #505

### Plugin can't handle functions that live in custom scopes besides globals (Servoy 6.1)

05/06/2012 12:55 PM - P Bakker

<b>Status:</b>	Closed	<b>Start date:</b>	05/06/2012

<b>Description</b>			
If I pass a scope method as second param of the addKeyListener plugin, on line 79 of the MyFunctionDefinition(Function f) constructor it won't find the formName, which is understandable, but there's no logic to retrieve the scope and thus when the function is invoked by the Keylistener, it passes null for the context in executeMethod(), thus assuming it's the globals scope.			

#### History

##### #1 - 05/10/2012 08:33 PM - Patrick Talbot

- Status changed from New to In Progress

Actually the MyFunctionDefinition should only be used in Servoy prior to 5.x (where FunctionDefinition didn't exist), this is a workaround that was used to make it compatible with Servoy 4.x

But maybe there's another problem here and it doesn't find the correct class in 6.1, and if it does, I think the execute method is deprecated so it can cause that issue. I'll have a look anyway.

##### #2 - 01/04/2013 06:30 AM - Patrick Talbot

- Status changed from In Progress to Closed

Fixed in v1.3.2
