

JSListPicker module - Feature #515

Would love to have a non-consecutive data search as a form property

Browser (if web client):	
Description	
Looking to make search on the ListPicker allow you to pick various non-consecutive words in, say, a description column that allows for hits on each individual words to show up in the results, similar to a Google type of search.	
So can look up: chair green and all the results will have chair and green but not necessarily in that order.	

History

#1 - 06/30/2012 08:44 PM - Robert Ivens

- Target version set to 1.0

#2 - 06/30/2012 11:48 PM - Robert Ivens

- Status changed from New to Closed

- Target version deleted (1.0)

- % Done changed from 0 to 100

This way of searching really deflates on how Servoy is working. If you want to use this kind of search you can simply use a custom search method that overrides the built in search code.

I noticed that this searchMethod property was not fully implemented. It is now.

Will be available in beta 5
