Description

Just saw your commit and comment in SVN: Be aware that IScriptable is not part of 5.2.x or 6.0.x public API, meaning that your plugin will not work in 5.2 for sure and probably not on earlier versions of 6.0.x
You could stick with IScriptObject until Servoy discontinue support for 5.2.x and 6.0.x
Or you might need to create a 6.1x branch to deal with this breaking change and create 2 downloadable jars.
