

Servoy JasperReports Plugin - Defect #575

Load image by path

11/12/2012 02:59 PM - Roberto Simonati

Description

I use plugin version 3.3.0, Ireport 4.0.0 and Servoy 5.2.15.

I used velocityPlugin to generate a barcode. I get the barcode URL by `barcode.getURL()` function.

So, I have the URL of my barcode image.

I passed the URL string to a param of Ireport.

I have the param "path_barcode" class `java.lang.String`.

I have the image class `java.lang.String` and the image expression: `$P{path_barcode}`

From the print preview from IReport the report read the correct image with this method but from servoy didn't work.

For now, I get the bytes from the barcodeURL and after:

```
var v_img = new Packages.java.io.ByteArrayInputStream( v_bytes );
```

```
v_img = Packages.java.io.IOException.read( v_img );
```

and pass the variable "v_img" to a param defined `java.awt.Image` (the image object class is `java.awt.Image`) and works.

See the discussion in servoy forum: <https://www.servoy.com/forum/viewtopic.php?f=15&t=18815>

Thank you for help.

Bye

Roberto
