Description			
Hello,			
How to pass <i>media:///logo.png</i> to .jrxml built in iReport?			
Familiar with below approach:			
https://www.servoy.com/forum/viewtopic.php?f=15&t=16909			
but now need to submit Servoy's media object			
Any hints? Are there any preferred formats, extensions?			
Regards

did you try this kind of jasper usage:

- create a logo parameter in your report (parameter class java.lang.object) then from your ireport palette place an image component (cancel the path wizard)
- in the image component check that expression class is java.awt.image and change the source expression to `net.sf.jasperreports.engine.util.JRImageLoader.loadImage((byte[]) $P{logo})`
- then from servoy

```
parameters['logo']=solutionModel.getMedia('mylogo.png').bytes;  
plugins.jasperPluginRMI.runReport(databaseManager.getDataSourceServerName(controller.getDataSource()),  
'yourreportwithlogo.jrxml' ,null,plugins.jasperPluginRMI.OUTPUT_FORMAT.VIEW,parameters);
```

Thanks Fabrice -it works!
JRImageLoader.loadImage does the trick
