Dialogs module - Defect #614

call to showInfoDialog in onHide event of FIMD doesn't work

Description

When users close a FIMD using the close box, I sometimes bring up a message in a showInfoDialog. I do this in the FIMD's onHide event. But if I call globals.DIALOGS.showInfoDialog() in the onHide event of a FIMD that was opened using globals.DIALOGS.showFormInModalDialog it doesn't display the infoDialog. It would be great if it could do that.
