Description			
It would be very helpful, to be able to set the OFFSET_X and OFFSET_Y parameters of a JasperReport within Servoy. The parameters have to be for the direct printing function and the jasperViewer itself.			
Is it possible to implement this?

Hi,

I think what you need is already possible; please see [this older issue](#) and some corresponding [release notes](#). This should work for the viewer and all export formats for that matter, as well.

Regards,
Andrei

Hi Andrei

It is not possible to do it. If I set the OFFSET_X and OFFSET_Y to 500 the Report looks the same as it looks with no OFFSET. Andrei can you please look in the code of the plugin and test this functionality. If I look at the code I am sure it only is set for export formats and not for print an viewer format.

Regards,
Stefan
