VelocityReport Plugin - Feature #705

function call to embed byte array (image) inside the template

Description

I have a server setup where one can't make any calls to the server without authorization from a third party server. When I use the webclient to render a report with images that are embedded in the solution then the VelocityReport plugin will send a call using a http(s) call to the server to get those images. In my case this doesn't work because it requires authentication.
Embedding the image using base64 doesn't work either (see issue #703).

Would it be possible to have a specific function call to embed a byte array in base64 format inside the HTML.

- Status changed from New to Closed

Added getByteMedia(byte[], [String id], [int width], [int height], [String cssClass]) and associated ByteMediaWrapper.
Available in v3.2
