

Servoy JasperReports Plugin - Defect #769

Problem on Mobile Platform

12/04/2013 12:49 PM - Stefania Colombara

Status: Closed	Start date: 12/04/2013
Priority: Urgent	Due date:
Assignee:	% Done: 0%
Category:	Estimated time: 0.00 hour
Target version:	
Browser (if web client):	

Description

If I execute my solution on Mobile Platform as servoy-webclient(<http://localhost:8080/servoy-webclient/mysolution->) as solutionType Normal not mobile the command :
plugins.jasperPluginRMI.runReport(source, cname_report, null, plugins.jasperPluginRMI.OUTPUT_FORMAT.VIEW, param_report) doesn't work while on Windows OS (servoy-webclient) the file was downloading.
How can I do to see the report on Mobile Platform?

Hi,

What mobile platform are you using (apple/android, tablet/phone)?

If a website generates a download i get these in my downloads folder automatically (without any dialog) on my android phone, i would expect the same here with the report.

Rob

I'm using android phone and in my downloads folder I don't find report

#3 - 02/08/2014 06:51 PM - Andrei Costache

I am using also an Android phone and for me it works fine: I see the files in my Downloads folder. Do you get any errors? Does your server log report anything?

Regards,
Andrei
