Dialogs module - Feature #781

Select Value when user clicks on Cancel button

Description

When a user clicks on Cancel button, dialog returns nothing/empty value.
Sometimes (i.e., in an Input Dialog) the user can leave an empty value, then Servoy can't distinguish between that empty value and press cancel button.
I think that Cancel button must return null value, or a user-defined value (using a method like "setCancelButtonValue()")

What does the smart-client return in this situation? because we wan't that to be in sync!

#2 - 01/31/2014 08:19 AM - Juan C. Cristobo

I don't use the module in smart client, but if it uses dialogs plugin, the plugin also returns nothing/empty value.

#3 - 01/31/2014 01:14 PM - Harjo Kompagnie

oke, than I don't think it's wise to change that behaviour, there are many projects using this module both in smart & web, so that would break than, agree?

#4 - 01/31/2014 01:25 PM - Juan C. Cristobo

Perhaps a method like "setCancelButtonValue()", where the user can define other value than default, it won't break any current project...

#5 - 02/05/2014 11:40 AM - Juan C. Cristobo

Found an easy way:
Put this code anywhere (i.e., OnOpen Solution), before calling dialogs module:

```
solutionModel.getForm('dialogs_base').getVariable('returnValue').defaultValue = null;
```

You can set every value that dialogs returns when you click on cancel button.
It only works on web client, I think...

- Status changed from New to Closed

OKke, that's a nice workaround indeed!

Will close this ticket!
