Hi Irene,

We would like to display the twitter feeds of contacts in our database. One of my colleagues made it work in Servoy 6 about a year ago.

I'm having difficulty getting the twitter plugin to work on Servoy 7.

Connecting seems to work, but getProfile and many of the other functions result in errors:
See: <http://screencast.com/t/sEbnuFPm>
Errors generated from sample solution.

If I run the demo solution and plugin in Servoy 5.2.x I do see that Twitter now requires an SSL connection. Perhaps Servoy 7.4.x shows this SSL error in this fashion, but I haven't tested it in that version. Perhaps there is another issue with Servoy 7.4.x and this plugin.

Is it possible to work with a single account per application?

An account is a twitter user. They are the same.

The demo application was made to use multiple accounts/users but of course you can create a solution that only uses 1 account/user.
