Description

It seems that when a pdf is generated the font-weight options in my template are ignored.

I've got the following template:

```
#foreach ($row in $filterTable)
```

```
<tr>
```

```
<td style="width:50px;">${row.title}</td>
```

```
<td>#if($row.col1)${row.col1}: <b>${row.val1}</b>#end</td>
```

```
<td>#if($row.col2)${row.col2}: <b>${row.val2}</b>#end</td>
```

```
<td>#if($row.col3)${row.col3}: <b>${row.val3}</b>#end</td>
```

```
<td>#if($row.col4)${row.col4}: <b>${row.val4}</b>#end</td>
```

```
</tr>
```

```
#end
```

I've also tried changing the `` tag with `` or a span with the following styling:

```
span{font-weight:bold;}
```

But the val columns are never in bold.

When I output to a html instead of pdf it does show the text in bold.

History

You can ignore this issue, it seems to be specific to my development environment. Our test server does show the correct font-weight.
