Description			
<p>Hi Patrick,</p> <p>just a small feature we bump into often.</p> <p>You can set the Appname to %jarName% for all jars, that's working fine.</p> <p>but we manually, sign the j2db.jar, with our own Appname like: 'My Awesome App', because that is the one that's shown, when you download the client the first time.</p> <p>After that, we have to think about, to change back the Appname setting back to: %jarName%</p> <p>Maybe you could a small feature, that add's an extra property/setting: Appname for j2db.jar</p>
