#### Description

Hi Patrick,

just a small feature we bump into often.

You can set the Appname to %jarName% for all jars, that's working fine.

but we manually, sign the j2db.jar, with our own Appname like: 'My Awesome App', because that is the one that's shown, when you download the client the first time.

After that, we have to think about, to change back the Appname setting back to: %jarName%

Maybe you could a small feature, that add's an extra property/setting: Appname for j2db.jar
