#### Description

Hi,

I'm trying to use the plugin on 64bit java setup on a 64bit windows machine. But when running the client, I can see the jcob object is null from servoy\_log file. I can however successfully get the plugin to work with a 32 bit java on a 64bit windows machine. I was wondering what can we do to make this work on a 64bit java setup as I can't ask all our clients to install java 32 bit on their machines.
