VelocityReport Plugin - Defect #883

Elapsed time calculation in sample not working

09/25/2015 02:02 PM - Steve Hawes

Status:	Rejected		**Start date:**	09/25/2015
Priority:	Normal		**Due date:**	
Assignee:			**% Done:**	0%
Category:			**Estimated time:**	0.00 hour
Target version:				
Browser (if web client):	Safari 8.0.8			

Description

When I import and run the sample the footer of the PDF page is supposed to show the elapsed time for the report to run but this does not work. I have tried various things to get this to work but none seem to give the desired result! The first thing was to get the start time in milliseconds in the context by using context.start = Date.now() and I can see that this works OK but nothing I do will get the elapsed calculation to work properly!

History

#1 - 11/07/2015 05:35 AM - Patrick Talbot

- Status changed from New to Rejected

If you set

```
context.start = new Date().getTime();
```

You can later do this in your template to get the elapsed time (in milliseconds):

```
#set($ms = $start - $now.time)
$ms
```
